

## **Project: *Imagine*Kimberley**

**Client:** City of Kimberley

**Key Deliverable(s):** Integrated Community Sustainability Plan

**Timeline:** November 2010 – June 2011

**Centre Role:** The Centre is working with the City of Kimberley (CoK) to facilitate the development of their community sustainability plan.

### **Project Details**

#### **Planning**

The City of Kimberley is undertaking the development of their integrated community sustainability plan. The Centre assisted the CoK with the creation of the Community Sustainability Advisory Team (CSAT), whose members represent the interest of the community in the development of the plan, and are deeply engaged in every aspect of the process. The Centre provided sustainability training to the CSAT, Kimberley staff and Council, and facilitated a visioning process with the CSAT and the community to come up with their descriptions of success for sustainability in each of ten identified community systems by the year 2025. Based on the articulated descriptions of success, an analysis of the current situation in the community was done, and a set of indicators for measuring performance towards the community vision were determined.

#### **Implementation**

The Centre then worked with the CSAT to develop ideas for actions and initiatives that community partners could take to help move Kimberley toward its vision for the year 2020. Actions will then be designated to community partners, who will consider them for implementation as part of their operations. Additionally, the Centre provided decision making tools and training to help embed the community aspirations into on the ground activities, a monitoring and tracking tool to help assess progress toward the community indicators, and a tool to help keep track of action implementation progress.

**Broad community input** was sought throughout the process via the ImagineKimberley [webpages](#) , public events, one on one presentations, social media ([facebook site](#)) three community online surveys for input to the vision, actions, current reality and overall document.

The initial ImagineKimberley planning and implementation is anticipated to be completed by the end of June 2011.
