

## **Project: Imagine Invermere**

**Client:** District of Invermere

**Key Deliverable(s):** Integrated Community Sustainability Plan

**Timeline:** November 2010 – June 2011

**Centre Role:** The Centre is working with the District of Invermere (DoI) to facilitate the development of their community sustainability plan.

### **Project Details**

The District of Invermere is undertaking the development of their integrated community sustainability plan. The Centre assisted the DoI with the creation of the Community Sustainability Advisory Team (CSAT), whose members represent the interest of the community in the development of the plan, and are deeply engaged in every aspect of the process. The Centre provided sustainability training to the CSAT, Invermere staff and Council, and facilitated a visioning process with the CSAT and the community to come up with their descriptions of success for sustainability in each of nine identified community systems by the year 2030. Based on the articulated descriptions of success, an analysis of the current situation in the community was done, and a set of indicators for measuring performance towards the descriptions of success were determined. The Centre then worked with the CSAT to develop ideas for actions and initiatives that community partners could take to help move Invermere toward its vision for the year 2030. Actions will then be designated to community partners, who will consider them for implementation as part of their operations. The complete Integrated Community Sustainability Plan was then drafted and is being released for community input on the website.

Community input was sought throughout the process via the Imagine Invermere website <http://imagineinvermere.ca/>

The Imagine Invermere process is anticipated to be completed by the end of June.
